

State Of Utah Trust Lands

Book Cliffs, Wasatch Plateau, and Castle Valley Coal Reserves

LEGEND

- Coal-Reserves Trust Lands
- Other Trust Lands
- Federal Coal Leases
- Unleased Federal Coal Tract
- BLM Administered Lands
- National Forest Lands
- State Wildlife Lands
- Private Lands
- Trust Mineral Ownership
- Trust Partial Mineral Ownership
- Active Mines
- Sealed or Abandoned Mines
- Coal Load-out
- Coal Outcrop

1999

Prepared by John T. Blake and Jeff A. Roe
Utah School and Institutional Trust Lands Administration

Hydrography, transportation, and federal and county boundary information was taken from USGS DIG files from 1:100,000 scale maps out of the State Geographic Information Database (SGID) and rectified to SITLAS 1:240,000 PLSS (township, range and section lines) coverage. The PLSS coverage was built from USGS DIG files and USGS CFI files and internally digitized data. All other information was researched and digitized within the Agency for this project and only represents selected data. The coal outcrop lines were digitized from "Federal Coal Leases" maps and from Utah Geological Survey Coal Monographs by the Agency. The coal depth line is approximate. Official and detailed information is available from the Automated Geographic Reference Center and the Trust Lands Administration.
